C.2.6.4 Proposed Research Plan Subsection

- In this section the plan must include a project plan which outlines the Project Organisation (Project team members, roles and responsibilities of each member, tasks assigned to each member).
- Project schedule/Work Breakdown Structure (WBS) with the work divided into manageable activities linked to specific time-bound outcomes.
- Each aim should have objectives linked to it.
- The research aim(s) and objective(s) should relate directly to the research project and not to capacity or human resource.
- Research aims and objectives must be a crystal clear indication of what you aim to achieve and this will enable the reviewer to recognise exactly what the aims are.
- You can also include Key Performance Indicators (KPIs) e.g. patents, articles, conference presentations and human capital development. The next sub-section will appear once a previous sub-section is completed and saved.
C.2.6.4 Proposed Research Plan Subsection (continued)

- When you have saved the aims and objectives of the research plan on the NRF Online Submission System, the screen above will appear. Your aims and objectives will be indicated and there is an option to edit or add more aims and objectives.

C.2.6.5 Methods Subsection

- In this section you must describe the study design, site selection, data collection and data analysis.
This section indicates which policy imperative and/or national research/institutional strategy your proposal aligns to as well as the contribution of the research project to the current knowledge base.

Section should also capture the impact (research/discipline) of the research to the scientific community and impact you expect from the project on research and training/teaching in your field/discipline.

If it applies, please describe the impact of your research beyond your field/discipline and to the non-scientific community. In particular, describe potential impact and transfer measures to economy, industry, politics or society.

Indicate how you will publish/communicate your results. Specifically, what established academic communities (e.g. which journals and conferences) do you see your work contributing to?
If this is an on-going project select "Yes" for the list of research output records to appear from your CV.

This section provides information of work performed prior to the application and the knowledge to build on.

You must provide information of work performed prior to the application and the knowledge to build on.

Research Outputs Records allow you to give/add the details on measurable outputs that are envisaged for the entire project, e.g. publications and patents.

You must Click on the "->" icon next to the relevant Research Output type listed to access the records under that type.

Click on the "Add Another" button to display a window listing the records from your CV for the selected Research Output type.
