## 7. SECTION 2: TERMS OF REFERENCE

### 7.1 BACKGROUND AND INTRODUCTION

iThemba LABS has identified a need to improve its business operations to cater for the needs and expectations of its customers and employees. To achieve this, an efficient and effective technical infrastructure should be in place to enable core business to achieve objectives. Due to the complex nature of some of these services, it is not possible to offer all services in-house, hence the need to outsource other services to external service providers.

Service Required: -

**Appointment of a service provider to perform a Computed Tomography (CT) Scanning service of Gallium Target Capsules for iThemba LABS Cape Town for a period of -36 months.**

This work will be done off-site.

### 7.2. SECTION 3: SPECIFICATIONS

#### 7.2.3. Scope of the required services

The Radionuclide Production Department (RPD) manufactures high-grade radiopharmaceuticals used for diagnostic applications in nuclear medicine. It produces these radiopharmaceuticals under Good Manufacturing Practice principles that are the requirements for the South African Pharmacy Council and South African Health Products Authority and has distribution agreements with companies around the world. Therefore, products supplied by the Radionuclide Production Department should be of a high and consistent quality.

To produce the radioisotope <sup>68</sup>Ge, Gallium targets are used to produce the radioisotope. The Gallium targets are regarded as the starting material for the production of radioisotopes. These targets are irradiated with a

66 MeV proton beam which is water cooled during the irradiation process. The Gallium targets are gallium metal encapsulated in niobium capsules. To seal the gallium metal in the niobium capsule, the niobium capsule is electron beam welded. In order to check the integrity of the electron beam welding, the gallium targets' needs to be Computed Tomography (CT) Scanned.

#### 7.2.4. Deliverables

iThemba LABS seek to appoint a service provider who is capable of performing the Computed Tomography (CT) Scanning of the Gallium target capsules for a period of 12 months on an as and when required basis. The Gallium target is circular and is 43.5 mm in diameter with a thickness of 4.25 mm (see attached drawing:).

The Service provider must be able to perform the Computed Tomography (CT) Scanning of the Gallium targets as per the following criteria:

Gallium targets are irradiated tilted 90 degrees (the artefact is more severe but is also more localised, as two scans are required, making sure there is no overlap) with respect to the horizontal and rotated vertically around the centre.

- Beam filtered with 0.5mm copper plate
- Screen filtered with a copper plate
- Targets are scanned twice with a rotation around the normal axis through the centre of 90 degrees clockwise from a) to b) in Figure 1.

**Figure 1:** a) slice of target. a): scanned at a random angle, b): target rotated by 90 degrees around its normal centre axis.

- Videos of only front and rotation slice with 5 micrometre per front slice and 0.1 degree per rotational slice as indicated should be provided for each target.
- Video format: . with naming as follows:
  - Batch # Target # Front slice
  - Batch # Target # Front slice 90
  - Batch # Target # Rotation
  - Batch # Target # Rotation 90
- Total volume of all cavities within the Nb capsule is extracted. A picture highlights cavity with a distinct colour.

- The exact same protocol is repeated for each individual target and documented as a public protocol published at <https://www.protocols.io>.

The Computed Tomography (CT) Scanning of gallium target capsules are estimated to be for 70 targets per year. Targets are pre-selected upon photograph after manufacturing

**NB: the successful bidder is required to sign a non-disclosure undertaking from page 25 below.**

**8. PRICING SCHEDULE INSTRUCTIONS:**

- Bidders must price in accordance with the pricing schedules below, this will enable iThemba LABS to compare priced offers. The quantities are estimates and do not reflect the actual quantities.
