## 1. BACKGROUND

In 2005, the Republic of South Africa (RSA) and the Russian Federation (RF) signed a Memorandum of Agreement (MoA) that led to South Africa becoming an associate member of the Joint Institute for Nuclear Research (JINR). JINR is an international scientific research organization located in Dubna, Moscow region. Amongst other things, the agreement enabled research opportunities and training of South African postgraduate students in the following research areas of the JINR:

- I. Accelerator Technology - This thematic area includes the development of technologies associated with producing accelerated ion-beams, including ion-sources, charge breeders, mass selectors, beam cooling, accelerators, and beam optics of stable as well as radioactive ion-beams.
- II. Focal Areas of Heavy Ion Physics Research - Heavy-ion physics research is undertaken with a suite of accelerators located at the Flerov Laboratory for Nuclear Reactions (FLNR) at the JINR. Focal areas are: (i) Nuclear-Reactor materials modification by swift heavy ions and (ii) Nuclear Structure Theory.
- III. Applied Nuclear Thematic - The focus will be on the development and applications of technologies using ion bombardment with swift heavy ions. The applications could be, for instance in track etched polymeric films for gas separation membranes; or super hydrophobic surfaces; stress testing of electronic circuits for space technologies; creation of anti-bogus labelling; volt-ampere characteristics of semiconducting polymers for sensors; secondary structured surfaces; improved adhesion between metal and polymers, etc.
- IV. Theoretical Physics and Computing - The thematic area involves Few-body problems in nuclear physics including multi-cluster nuclear systems and hypernuclei, dense and hot nuclear matter, simulations for nuclear collisions in the Nuclotron-based Ion Collider Facility (NICA) energy region and Statistical methods applied to nuclear physics.
- V. Education - Covers all aspects of education within the SA-JINR Framework and these include the SA-JINR Student Practice which is a 3-week educational event aimed at exposing South African postgraduate students to world class scientific equipment, scientific research and expert international rated scientists at the JINR laboratories. This also includes conferences and student visits and supervision at the JINR. This thematic area (Education) is also concerned with facilitating the placement of students and research scientists in various projects and laboratories as part of its response to human capital development (HCD).

As part of the SA-JINR agreement, the National Research Foundation (NRF) facilitates an annual International Student Practice (ISP) that is held in June at the JINR laboratories in Dubna, Russia. The goal of the Student Practice is to build a critical mass of students that may later advance in the various nuclear research activities offered by the JINR to the benefit of South Africa. Through previous experiences with students who attended the International Student Practice at JINR, it was observed that most South African students require hands-on training related to the basics of Nuclear and Materials Sciences before participating in the ISP at the JINR.

This may be attributed to some universities offering science courses but are unable to provide hands-on practical training due to the unavailability of laboratory equipment for practical training in nuclear and materials sciences. Given the cost of acquisition of such instruments, students from the lower resourced Historically Disadvantaged Institutions (HDIs) are mostly affected by this lack of science laboratory equipment at their institutions. The consequence is that many students, particularly those from HDIs, lack the requisite skills on instrumentation techniques and related knowledge to gain maximum benefit from the Student Practice training offered at Dubna. It is for this reason that a two-phase approach to the Student Practice initiative was implemented as outlined below.

**Phase 1:** Students attend the SAINTS@tlabs Physics Summer School at iThemba LABS, Cape Town in January 2025. The school is organised by the Southern African Institute for Nuclear Technology and Sciences (SAINTS) at iThemba LABS.

**Phase 2:** A cohort of students participating in Phase 1 will be selected, on a merit basis, to participate in the SA-JINR International Student Practice, which will take place at JINR, Dubna in June 2025.

## 2. SAINTS@TLABS SUMMER SCHOOL AT ITHEMBA LABS, CAPE TOWN

### 2.1. Scope and Objectives

In addressing the lack of scientific laboratory equipment at the HDIs and related skills shortage amongst their students, iThemba LABS, Cape Town (<http://tlabs.ac.za/>) will be hosting a Physics Summer School in the year 2025. This will provide students with exposure to techniques and methodologies that will equip them to participate in the SA-JINR International Student Practice. The primary focus of the Summer School will be on lectures as well as hands-on training in Nuclear Related Applications and Instrumentation Techniques.

Students will be selected through a competitive call for the three-week Summer School Training Program and this call will be open to students who are South African Citizens or South African Permanent Residents from African Countries registered at South African Higher Education Institutions, and intending to pursue postgraduate studies in Nuclear Sciences. The students will obtain introductory theory lectures on instrumentation and hands-on experience on the equipment available at iThemba LABS. To ensure that the training offered at the Summer School is aligned with the JINR research areas, researchers from JINR will also be invited to present lectures at the Summer School.

### 2.2. Eligibility Criteria

To qualify for consideration, applicants must comply with the following eligibility criteria:

- All applicants must be South African Citizens or South African Permanent Residents from an African country.
- All applicants must currently be registered at any South African Higher Education Institution, in their last year of an undergraduate degree, Honours or in a Master's programme or a Doctoral programme.
- Students must be provisionally accepted for Honours, Masters or Doctoral studies for 2025 at any South African Higher Education Institution.
- All applicants must be provisionally accepted in the following disciplines:
  - Physics;
  - Mathematics/Applied Mathematics;
  - Chemistry;
  - Engineering (especially nuclear, materials, electrical and chemical);
  - Computer Sciences; and/or
  - Any Nuclear Sciences related discipline.

*Preference will be given to black and female students and students from HDIs.*

***Individuals registered for a part-time postgraduate degree, namely Honours, Masters or Doctoral degree, are not eligible to apply.***

### 2.3. Application Requirements

The NRF issues a Call for Proposals, which is placed on the NRF website and is disseminated to the Research Offices of the various institutions. Applications must be submitted to the NRF on the NRF Connect System at URL: <https://nrfconnect.nrf.ac.za/>. In addition, applicants must ensure they have completed/updated their *Curriculum Vitae* (CV) on the NRF Connect system. All applications must be duly authorised and approved by the institution's Designated Authority (DA), who in turn, submits the application to the NRF for review.

The Call for Proposals will be as follows:

**Opening Date: 1<sup>st</sup> October 2024**

**Applicants Closing Date: 4<sup>th</sup> November 2024**

**DA Closing Date: 11 November 2024**

Outcomes will be communicated by 20 December 2024.

***No late applications will be considered.***

For the application to be deemed complete, the following attachments, in PDF format, must accompany the application.

- I. **Proof of Registration** for the 2024 academic year.
- II. A **Provisional Acceptance Letter** for studies in the 2025 academic year.
- III. Full up-to-date **Academic Transcript and** certified copies of **Certificates** (of previous degrees).
- IV. **Copy of South African Identity Document or Passport.** *South African students who are currently not in possession of a passport are encouraged to apply for one before joining the summer school.*

***Applications that do not have all the required supporting documents will be deemed incomplete and will not proceed for review.***

### 2.4. Evaluation Processes and Criteria

For a fair and objective selection process, a two-step evaluation process will be undertaken:

#### **Step 1: Pre-screening**

All submitted applications will be screened for eligibility, based on the criteria specified below.

Applications will be pre-screened against the following requirements:

- All applications must be endorsed by the applicant's **Supervisor or the Head of Department (HoD)**.
- All applications must have all **mandatory attachments** attached, as specified in this document.
- Demonstrated commitment, to pursue an Honours, Masters or Doctoral degree in the specified disciplines in 2025 (A Provisional Acceptance Letter for 2025 must form part of the mandatory attachments).

Applications that are unable to meet the above-mentioned requirements, will be deemed incomplete and will not proceed to the review process.

## Step 2: Review Process

Applications will undergo a virtual review by independent reviewers who will assess applications that are eligible for funding using the following criteria:

**Table 1:** Evaluation Dimensions for the SAINTS@tlabs Summer School at iThemba LABS

EVALUATION DIMENSION	WEIGHTING	DESCRIPTOR
<b>Academic potential of the student in the case of undergraduates and ability to independently undertake a research project in the case of Honours, Masters and Doctoral applicants</b>	<b>20%</b>	<i>The academic transcript and CV section will be used to evaluate this criterion.</i>
<b>Scientific merit of the proposal</b>	<b>20%</b>	<i>The information presented in the application form will be used to evaluate this criterion.</i>
<b>Alignment of the proposed research to JINR thematic areas</b>	<b>20%</b>	<i>The information presented in the application form will be used to assess this criterion.</i>
<b>Student experience in using the same or similar equipment to what is used at iThemba LABS and JINR</b>	<b>10%</b>	<i>The information presented in the application form will be used to assess this criterion.</i>
<b>Strength of the Supervisor/HOD motivation</b>	<b>30%</b>	<i>The supervisor/HOD motivation that forms part of the application form under the Application Support Input section will be used to evaluate this criterion.</i>

A maximum of 30 applicants will be selected to attend the 2025 SAINTS@tlabs Physics Summer School at iThemba LABS.

The selection of students for participation in the iThemba LABS Summer School will be based on the recommendations of the merit review of applications and on the DSI-NRF Postgraduate Funding Policy. These guidelines are summarised as follows:

- 95% to South African Citizens and South African Permanent Residents; and
- 5% to International students.

The overall student target for South African Citizens and South African Permanent Residents is 55% women, 90% Black (African, Coloured and Indian) and 1% students living with disabilities. In addition to the demographic targets above, preference will be afforded to students from HDIs.

### 2.5. Reporting Requirements

All Summer School attendees must submit a completion report one month after the completion of the Summer School to iThemba LABS in the NRF. Students will also be assessed by iThemba LABS on their practical activities and various aspects until completion of the school.

The final student reports will be used to shortlist students for participation in the SA-JINR International Student Practice, in Dubna, Russia in June 2025.

### **3. INTERNATIONAL STUDENT PRACTICE AT JINR, DUBNA**

#### **3.1. Scope and Objectives**

The International Student Practice at JINR is a three-week programme aimed at attracting talented young people to the Institute and building awareness of the possibilities of studying and conducting scientific research at JINR. The Practices have been held since 2004 on the initiative of the JINR University Centre. The Practice aims to give interested students an opportunity to:

- Obtain information about the wide range of scientific research conducted at JINR;
- Perform a research project at the basic experimental facilities of the Institute under the guidance of specialists;
- Meet with the staff members of the Institute and choose a scientific supervisor for the case of visiting JINR for a longer period to prepare a thesis;
- Learn from the lectures by the leading JINR scientists about new problems of modern physics; and
- Get acquainted with the Russian culture.

#### **3.2. Eligibility Criteria**

To qualify for consideration, students must comply with the following eligibility criteria:

- Students must have attended the SAINTS@tlabs Physics Summer School in the year 2025. All students must be South African Citizens or South African Permanent Residents from an African country.
- Students must be registered for Honours, Masters or Doctoral degrees in the below-mentioned disciplines for 2025 at any South African or African Higher Education Institution.
- All students must be completing their studies in the following disciplines:
  - Physics;
  - Mathematics/Applied Mathematics;
  - Chemistry;
  - Engineering;
  - Computer sciences; and/or
  - any related nuclear sciences discipline.

#### **3.3. Evaluation Processes and Criteria**

A selection panel comprising Research Impact and Innovation Support and Advancement (RIISA) and iThemba LABS representatives will be constituted to assess the performance of attendees of Phase 1: Summer School using the following criteria:

**Table 2:** Evaluation Dimension for the SA-JINR International Student Practice at JINR, Dubna

EVALUATION DIMENSION	WEIGHTING	DESCRIPTOR
Potential of the student to independently undertake a research project using the same or similar equipment to what is used at iThemba LABS and JINR	50%	The information presented in the Summer School completion report will be used to evaluate this criterion
Strength of the iThemba LABS Summer School completion reports	50%	The information presented in the Summer School completion report will be used to evaluate this criterion

Students meeting the criteria in Table 2 will be shortlisted for participation in the SA-JINR International Student Practice in Dubna by the SAINTS@tlabs team.

**Preference will be afforded to students from HDIs and in alignment with the DSI-NRF Postgraduate Funding Policy.**

### 3.4. Reporting Requirements

All JINR International Student Practice attendees must submit to the iThemba LABS in the NRF a completion report one month after the completion of the student practice training in Dubna, Russia.
